# **QUESTION**

# **GATE EC 2008- Q35**

Let x(t) be the input and y(t) be the output of a continuous time system. Match the system properties P1, P2, and P3 with the system relations R1, R2, R3, R4.

# **Properties** Relations

P1: Linear but NOT R1:  $y(t) = t^2x(t)$  time-invariant

P2: Time-invariant but R2: y(t) = t|x(t)|

NOT linear

P3: Linear and time- R3: y(t) = |x(t)|

invariant

R4: y(t) = x(t-5)

- 1) (P1,R1), (P2,R3), (P3,R4)
- 2) (P1,R2), (P2,R3), (P3,R4)
- 3) (P1,R3), (P2,R1), (P3,R2)
- 4) (P1,R1), (P2,R2), (P3,R3)

## **SOLUTION**

**Definition 1.** We say that a system is **linear** if and only if it follows the Principle of Superposition, i.e Law of Additivity and Law of Homogeneity.

**Definition 2.** A system is said to be **time invariant** if the output signal does not depend on the absolute time, i.e a time delay on the input signal directly equates to the delay in the output signal.

# Law of Additivity:

Let the three input signals be  $x_1(t)$ ,  $x_2(t)$ , and  $x_1(t) + x_2(t)$  and their corresponding output signals be  $y_1(t)$ ,  $y_2(t)$ , and y'(t), then: For R1:

$$y_1(t) = t^2 x_1(t)$$
 (0.0.1)

$$y_2(t) = t^2 x_1(t)$$
 (0.0.2)

$$y_1(t) + y_2(t) = t^2(x_1(t) + x_2(t))$$
 (0.0.3)

$$y'(t) = t^2(x_1(t) + x_2(t))$$
 (0.0.4)

Clearly, from (0.0.3) and (0.0.4):

$$y'(t) = y_1(t) + y_2(t)$$
 (0.0.5)

Thus, the Law of Additivity holds. For R2:

$$y_1(t) = t | x_1(t) |$$
 (0.0.6)

$$y_2(t) = t | x_1(t) |$$
 (0.0.7)

$$y_1(t) + y_2(t) = t (|x_1(t)| + |x_2(t)|)$$
 (0.0.8)

$$y'(t) = t(|x_1(t) + x_2(t)|)$$
 (0.0.9)

Clearly, from (0.0.8) and (0.0.9):

$$y'(t) \le y_1(t) + y_2(t)$$
 (0.0.10)

Thus, the Law of Additivity does not hold. For R3:

$$y_1(t) = |x_1(t)|$$
 (0.0.11)

$$y_2(t) = |x_1(t)|$$
 (0.0.12)

$$y_1(t) + y_2(t) = (|x_1(t)| + |x_2(t)|)$$
 (0.0.13)

$$y'(t) = (|x_1(t) + x_2(t)|)$$
 (0.0.14)

Clearly, from (0.0.13) and (0.0.14):

$$y'(t) \le y_1(t) + y_2(t)$$
 (0.0.15)

Thus, the Law of Additivity does not hold.

For R4:

$$y_1(t) = x_1(t-5)$$
 (0.0.16)

$$y_2(t) = x_1(t-5)$$
 (0.0.17)

$$y_1(t) + y_2(t) = (x_1(t-5) + x_2(t-5))$$
 (0.0.18)

$$y'(t) = (x_1(t-5) + x_2(t-5))$$
 (0.0.19)

Clearly, from (0.0.18) and (0.0.19):

$$y'(t) = y_1(t) + y_2(t)$$
 (0.0.20)

Thus, the Law of Additivity holds.

# Law of Homogeneity:

Consider an input signal kx(t), where k is any constant. Let the corresponding output be given by y'(t), then:

For R1:

$$y'(t) = t^2kx(t)$$
 (0.0.21)

$$= ky(t)$$
 (0.0.22)

Clearly, from (0.0.22):

$$y'(t) = ky(t)$$
 (0.0.23)

Thus, the Law of homogeneity holds.

For R2:

$$y'(t) = t | kx(t) |$$
 (0.0.24)

$$= |k|y(t)$$
 (0.0.25)

Clearly, from (0.0.25):

$$y'(t) \neq ky(t)$$
 (0.0.26)

Thus, the Law of homogeneity does not hold.

For R3:

$$y'(t) = |kx(t)|$$
 (0.0.27)

$$= |k|y(t)$$
 (0.0.28)

Clearly, from (0.0.28):

$$y'(t) \neq ky(t)$$
 (0.0.29)

Thus, the Law of homogeneity does not hold.

For R4:

$$y'(t) = kx(t-5)$$
 (0.0.30)

$$= ky(t)$$
 (0.0.31)

Clearly, from (0.0.31):

$$y'(t) = ky(t)$$
 (0.0.32)

Thus, the Law of homogeneity holds.

... We get R1 and R4 are linear systems whereas R2 and R3 are non linear systems.

To check time-invariance, we introduce a delay of  $t_0$  in the output and input signal.Let the delayed output signal is  $y(t-t_0)$  and the output signal corresponding to the input signal delayed by  $t_0$  is given by y'(t).

For R1:

$$y(t-t_0) = (t-t_0)^2 x(t-t_0)$$
 (0.0.33)

$$y'(t) = (t)^2 x (t - t_0)$$
 (0.0.34)

Clearly, from (0.0.33) and (0.0.34):

$$y(t - t_0) \neq y'(t)$$
 (0.0.35)

Thus, the system is not time invariant. For R2:

$$y(t - t_0) = (t - t_0) |x(t - t_0)| \qquad (0.0.36)$$

$$y'(t) = (t) |x(t - t_0)|$$
 (0.0.37)

Clearly, from (0.0.37) and (0.0.38):

$$y(t-t_0) \neq y'(t)$$
 (0.0.38)

Thus, the system is not time invariant. For R3:

$$y(t-t_0) = |x(t-t_0)|$$
 (0.0.39)

$$y'(t) = |x(t - t_0)|$$
 (0.0.40)

Clearly, from (0.0.39) and (0.0.40):

$$y(t-t_0) = y'(t)$$
 (0.0.41)

Thus, the system is time invariant.

For R4:

$$y(t - t_0) = x(t - t_0 - 5)$$
 (0.0.42)

$$y'(t) = x(t - t_0 - 5)$$
 (0.0.43)

Clearly, from (0.0.42) and (0.0.43):

$$y(t - t_0) = y'(t)$$
 (0.0.44)

Thus, the system is time invariant.

... We get R3 and R4 are time invariant systems whereas R1 and R2 are not time invariant.

# Tabulating the results,

System	Linear	Time invariant
R1	Yes	No
R2	No	No
R3	No	Yes
R4	Yes	Yes

From the above table, option (1) is correct.
